

Albert Einstein College of Medicine Summer Undergraduate Research Program (SURP)

Award Type	Internship
Eligibility	
Class Eligibility	Undergraduates
Academic Area	
Deadline	February
Description	<p>The Summer Undergraduate Research Program (SURP) at the Albert Einstein College of Medicine offers college students the unique opportunity to work in a research laboratory at one of the world's top-ranking scientific institutions. SURP is national in scope: approximately 40 students from all over the country participate each year. These students arrive at Einstein in mid-June and spend nine weeks in a laboratory in one of ten basic science departments. Students receive a faculty list from which they can choose a laboratory where they will conduct their research. The students' choice is then reviewed by the faculty member. Most successful applicants have completed their junior year of undergraduate training and have a strong background related to biomedical research, such as biology, biochemistry, or chemistry. In addition to participating in an original research project, students take part in a series of lectures and a career opportunity day. At the end of the summer experience, each student presents a formal paper describing the progress of their research. Participants receive a generous stipend and free housing.</p>
Award	A stipend of \$2500 for their nine-week summer stay. Transportation assistance (up to \$500) is also provided.
Nomination Requirement	No
